MEMORANDUM FOR: Director, National Photographic
Interpretation Center

ATTENTION: Assistant for Operations

SUBJECT: Area Coverage of Cuba by U-2

1. The USIB today requested that the biweekly reports from COMOR on coverage of Cuba be accompanied by a map showing areas not covered. This map can be prepared by the COMOR Working Group if NPIC will supply us with overlays of mission plots on which clear coverage is indicated. Those you furnished yesterday for our pilot exercise were precisely what we needed.

2. Timing will be critical in this project, especially if a mission is flown on the Sunday preceding the USIB meeting. The schedule for each biweekly is as follows:

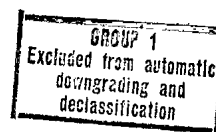

Monday - draft is written

Tuesday, 0800 - draft is revised, if necessary, to include results of a Sunday mission and is then typed on ditto

Tuesday, 0930 - draft is reviewed by the COMOR Photo Working Group, typed on mats, and forwarded to the USIB Secretariat through the Chairman COMOR. Deadline is 1000, so that the USIB members will receive their copies in time for review before the Wednesday meeting.

3. The map, in other words, must be prepared on Monday (or in unavoidable cases on Monday night) and completed by 0930 Tuesday morning, including information through the preceding Sunday.

SECRET

If we are sent overlays each day as soon as they are completed, we will have most of the basic information on file. In addition to current information, we will need overlays extending back from 15 June to the point where complete island coverage is reflected. It is essential that we receive the remainder (the results of Friday, Saturday, and Sunday missions) as early as possible on Monday. Anything you can do to expedite delivery would be appreciated.

4. Under the present schedule, these maps are to be produced on 27 July and every two weeks thereafter. If area coverage should fall excessively low at any time between regular reports, it may also be necessary to produce special coverage maps so that the Chairman COMOR will be able to advise the USIB regarding areas in which coverage is inadequate.
